

## Business Applications Programming

### (MS 806) Assignment 4

Please complete the following exercise and submit your solution on-line – Assignments Submission (documents types accepted: Microsoft Word or PDF), by at the latest Sunday October 30th @ 6:00PM. Your submission document should follow the general guidelines as detailed under the Assignments tab in the course module on Blackboard.

You will only be able to submit the assignment **once**

#### Task: Cairn's Auto

The screenshot shows a Windows-style application window titled "Cairn's Auto". The window contains several sections for selecting services and calculating costs.

**Oil and Lube**

- ☐ Oil Change (£26.00)
- ☐ Lube job (£18.00)

**Flashes**

- ☐ Radiator Flush (£30.00)
- ☐ Transmission Flush (£80.00)

**Misc**

- ☐ Inspection (£15.00)
- ☐ Replace Muffler (£100.00)
- ☐ Tyre Rotation (£20.00)

**Parts and Labour**

Parts (£)

Labour (£)

**Summary**

Service and Labour

Parts

Tax (on parts)

Total Fees

At the bottom of the window, there are four buttons: **Calculate**, **Receipts**, **Clear**, and **Exit**.

Cairn's Automotive performs the following routine maintenance services:

- Oil change—€26.00
- Lube job—€18.00
- Radiator flush—€30.00
- Transmission flush—€80.00
- Inspection—€15.00
- Muffler replacement—€100.00
- Tyre rotation—€20.00

Cairns also performs other non-routine services and charges for parts and labour (€20 per hour).

Create an application that will:

- 1) Create a form that resembles the one shown on page 1.
- 2) Display the total for a customer's visit to Cairns.
- 3) Store all the summary information that was generated when the "Calculate" button was pressed, in a file called "all\_receipts.txt".
- 4) The file "all\_receipts.txt" should record the current summary information and retain summary information from earlier transactions.
- 5) Display all the summary details stored in "all\_receipts.txt" when the "Receipts" button is pressed. (You decide how/where this information will be displayed)
- 6) Handle unexpected errors. (Invalid inputs, file not found etc.)
- 7) Follow good programming conventions for object names: include comments for some methods and at the top of the file to explain what the application is about.
- 8) Give the form a name that will display at the top of the form.
- 9) Include code to help the user to identify invalid inputs errors.
- 10) Use currency formatting to display the results in euros.
- 11) Include your name in the bottom right corner "Programmed by ....."
- 12) Include screenshots showing the application in use.
- 13) Include screenshots showing the application recovering from invalid input errors.

The application should have the following value-returning methods:

- OilLubeCharges —Returns the total charges for an oil change and/or a lube job, if any.
- FlushCharges —Returns the total charges for a radiator flush and/or a transmission flush, if any.
- MiscCharges —Returns the total charges for an inspection, muffler replacement, and/or a tyre rotation, if any.
- OtherCharges —Returns the total charges for other services (parts and labour), if any.
- TaxCharges —Returns the amount of sales tax, if any. Sales tax is 23% and is charged only on parts. If the customer purchases services only, no sales tax is charged.
- TotalCharges —Returns the total charges.

The application should have the following void methods, called when the user clicks the Clear button:

- ClearOilLube —Clears the check boxes for oil change and lube job.
- ClearFlushes —Clears the check boxes for radiator flush and transmission flush.
- ClearMisc —Clears the check boxes for inspection, muffler replacement, and tyre rotation.
- ClearOther —Clears the text boxes for parts and labour.
- ClearFees —Clears the labels that display the labels in the section marked Summary
