

CMPSC 101

LAB 6 – What to wear

Write a program to plan what you will wear to a party, using the following data. Only one result per run! See the examples run below.

Example run 1:

```
Are you going to the party? yes
Is the party outside? yes
Might it rain? yes
Wear an old outfit.
```

Example run 2:

```
Are you going to the party? yes
Is the party outside? no
Wear your new outfit.
```

Example run 3:

```
Are you going to the party? yes
Is the party outside? yes
Might it rain? no
Wear your current outfit.
```

Run it **8 times** with different data, **showing at least one run from each combination of three “yes/no” options**. Then, following the instructions in the “How to package and submit your labs” video, package up your work. Double check to confirm that the package is complete (i.e., all the header info, the code, the screen shots, the output, etc.), and then submit it to the drop box.

Next, go back and confirm that the submission is in the drop box!
