

XHTML

Put these files in a HW2 folder on the T drive. Create four documents, validate transitional.

hw2_list.html

Create a list linking to the three files listed below. It should look like:

- Links -- use a bullet
 - I. [Table](#)
 - II. [Form](#)
 - III. [Imagemap](#) -- nested list with upper roman bullets

hw2_imagemap.html

Use the hw2_imagemap.gif on the T drive. Hotspots should link to the three other files.

hw2_form.html

Create a student demographics form. Include fields for information about a student. For example, First name, Last name, major, gender, classification, and whatever else you think is appropriate. You should include the following form objects: checkboxes, radio buttons, pulldowns, textboxes, and textareas. Create links to the other three files.

hw2_table.html

Create the following table that takes up 50% of the width of the window and is centered. Create links to the other three files with upper roman for the bullets.

The screenshot shows a web browser window with the title "Kohers HW2 Table". The main content is a table with the following data:

Tables are primarily made up of tr's and either th's or td's			
th's are	Bold & Centered		vs. td's
td's are	Not Bold nor Centered		This table has 4 columns.
You can increase functionality by fiddling with colspan and rowspan.			

Below the table, a list of links is displayed:

- Links
 - I. [Imagemap](#)
 - II. [Form](#)
 - III. [List](#)

At the bottom of the browser window, there is a W3C XHTML 1.0 validation logo.

Below the browser window, there is a summary table with three columns:

Centered	SH.gif (centered)	Light Gray
----------	-------------------	------------
