Do not change the file name when posting the question. Provide in text citations when needed and references. Minimum 500 words each quesiton. Answer the question clearly. If you can do that than i will do my part:)

Question 1

Thinking back to Dr. Shelley's video on Predictive Analytics, what were two (2) points that either surprised you the most, or provoked the most thought, and why?

https://www.youtube.com/watch?v=U5Q9xwFPz2o

https://www.youtube.com/watch?v=ne0L2AKjGBI

Question 2

Think about all the concepts we've discussed this quarter, including the ones you have researched on your own. Of these, which do you think is the most important for the future of healthcare, and why?

This is what the was this discussed in class to help you answer this quesiton

The course provides knowledge of the key components of health care in the United States—the policy, economic, and societal forces that shape health care delivery. The course serves as an introduction to elements of the American health care system, including the provider components, the financing of health care, the basic structure of public policy making and public health systems, a comparative analysis of the American system to health care systems of other countries, and the legal and regulatory framework within the American health care system functions. In addition to the structural components of the system, the course reviews current issues within the American health care system, including public health, preparedness, quality of health care, health reform, payment mechanisms, and consumerism

Question 3

Hindsight is 20/20, and in this class, we've learned of a few instances where the intent has been positive or "good", but the outcome has been less than ideal. Think, for example, about "meaningful" use, or how ACOs can be seen as anticompetitve. Big data and predictive analytics are two of the most recent hot topics. Please offer your insight on what is required (from any perspective) in order for either of these concepts to live up to their hype.
