### **Topic**

We know from our life experiences that communication is the key to any and all relationships. This includes relationships between us and our family members and friends, as well as between nurses and our patients/families, co-workers, other healthcare team members, etc. Chapter 10 of our textbook addresses the elements of communication and this content is valuable to us in all the relationships that we have in life! Chapter 10 also describes how nurses can assess communication patterns in families and intervene. (See page 271 for definitions of the terms used below.)

- a) In your professional or personal experiences, provide ONE SPECIFIC example in which you have observed/assessed a functional communication process with a "functional sender" and a "functional receiver."
- b) Then, in your professional or personal experiences, provide ONE SPECIFIC example regarding your observation/assessment of a dysfunctional communication process with a "dysfunctional sender" and a "dysfunctional receiver."
