Chapter 10 Assignment

Create an html document called chap10assign.htm using notepad as explained in the following specifications:

Develop a Web document with a white background, black text and two headings as shown below (put in your name for the student name) and the following features:

a. Create a <title> tag that states: Chapter 10 Assignment.
b. A link labeled "Search Here". When the visitor moves the mouse over this link, the background color of the window turns green. When the visitor moves the mouse off of the link, the background color reverts back to white. The link when clicked should open Google.com in the same window.
    (Hint - http://www.w3schools.com/jsref/prop_style_background.asp)
c. A button labeled "Click me." When the visitor clicks on the button an alert box pops up with the message "You clicked the button!"
d. A line that says "My name is" followed by a text box with "Sam" already entered in it and the message "Go ahead, change my name." When the visitor changes the name in the box and then clicks outside the box, an alert should pop up with the message "Name was changed to: *name from box*" where *name from box* is the same as the name entered by the user. (For example, if you changed the textbox from Sam to Fred, the alert message should say "Name was changed to: Fred")
e. Create a button labeled "Reload." When it is pressed, the browser should reload the current webpage.
f. Create a button labeled "My Favorite Site". When the visitor clicks on the button a new window will open and the visitor will be at your favorite site. (look up the window.open( ) command to make your favorite site open in a new window)

Once you've completed this assignment, zip the html file and submit the zip file to the appropriate Dropbox.
