Assignment **42Loops**   In class assignment!

Name _Erica Cummings_   Date _3/22/2017_

Write a program using **all** the good practices that you have been taught in class.

You will call three functions (1. **forLoop** 2. **whileLoop** 3. **doWhileLoop**).

Ask for and input an integer **inputInteger**. Pass the integer to each of the three functions. Each function will have the same results. If the inputInteger is a 3, the output would be: **1 2 3xxx** for each of the functions/loop.

The rerun of the program will receive an input inputInteger value of 5, and the results should be: **1 2 3 4 5xxx** for each loop.

Note. 1) Write nice code. 2) You will use the variable++ feature whenever able to.
