Assignment **47LoopArray**   In class assignment!

Name _____   Date _____

Write a program using <u>all</u> the good practices that you have been taught in class.

Your program will create an integer array of 10 elements for the input of <u>**up to**</u> 10 golf scores (q to quite). Use a loop for the input.

After all the inputs, you will then output all the scores (using a loop), then output the total of all the scores, and then output the average of the scores.

Note when you do the average you must create a real (not integer) divide.

Example of the numeric output only:

    3

    3

    4

Total= 10

Average= 3.33
